WOOD'S CROP SPECIAL

Giving Timely Information and Prices of Seasonable Seeds

PUBLISHED BY T.W. WOOD & SONS SEEDSMEN RICHMOND VA.

VOL. XVI.

MARCH EDITION

1921

Our "Wood's Crop Special" is issued monthly during planting seasons. There is no subscription price, but is mailed free upon request. If any of our customers do not receive Wood's Crop Special regularly, and desire to do so, advise us and we will place your name on our regular mailing list.

SEASONABLE NOTES.

The open weather for the past few weeks has started a very heavy demand for both garden and field seeds. Prices of all seeds are very reasonable in price now, and farmers are generally availing themselves of the opportunity of putting in permanent crops in place of cotton and tobacco, at a greatly reduced cost of seeding. The demand for both Grasses and Clover is unusually heavy, and as a result there is a strong tendency towards higher prices. We confidently believe that prices on practically the entire list of field seeds have reached their low level for this season, and urge our customers to buy their requirements as early as possible, to be sure of getting the best of stocks as well as having the seed available when the right time for planting is at hand.

The demand for **Seed Oats** this spring has been unusually good, and as a result stocks of some varieties are running low. The Grain Market has recently shown good signs of higher prices, and there is good prospects for better prices at harvest time.

RED CLOVER is in very heavy demand this spring, due to the unusually low price prevailing now in comparison to last year. Every effort should be made to put in all adaptable land to this wonderful forage crop and soil improver. The low price at which the seed can be secured now makes it a very desirable crop to sow for fall and winter pasturage, as well as increasing the productivity of the soil to a wonderful extent.

A mixture of eight pounds of **Red Clover**, two pounds of **Alsike**, six pounds of **Alfalfa**, make an excellent combination, and will insure an excellent crop, as the Alsike Clover will stand more adverse weather conditions as well as taking on most any kind of land, and the Alfalfa will make a good showing if dry weather prevails.

FERTILIZERS

We call particular attention of our customers to the greatly reduced prices of our different brands of **Fertilizers**, and we believe that they are as low as high-grade fertilizers can be offered. The Fertilizers that we offer are specially prepared for the different crops for which they are recommended, and are giving the very best and most satisfactory results to our customers. When ordering your seed stocks do not overlook fertilizers, as they are the quickest and one of the best methods of increasing your yield.

Note our low price on Corn Fertilizer. Nitrate of Soda in good demand and prices firm, and consequently advise early purchases.

SEED POTATOES

From the information we have at hand there will be a very small crop of potatoes planted throughout the South this spring. The planting in the extreme Southern States is far below normal this year, which is partly due to the very low prices that farmers are getting for their potatoes now. The present available supply is fast being exhausted, and with only one-half to three-quarters of a crop planted, there will undoubtedly be a decided increase in prices when the new crop is harvested. The Potato Market has already shown signs of strength, and very heavy purchases are being made at the low prevailing prices.

Our **Maine Grown Seed Potatoes** have long had a reputation for superiority in quality and productiveness, and our trade in these is one of the largest in the South. The stocks which we offer are all especially grown for seed purposes in the best potato districts in this country, and are much superior to the stocks ordinarily sold. We use the greatest care in supplying our customers with the best stocks obtainable, and every bag is thoroughly hand picked and inspected before being shipped.

The best varieties for planting now are the **IRISH COBBLER** and **RED RIVER OHIO**, the former being much more popular throughout the Southern States. The **RED RIVER OHIO**, however, is a very fine variety for home table use, being a good keeper, with white flesh, cooks dry and mealy. For later planting we recommend the **GREEN MOUNTAIN** and **RURAL NEW YORKER**, both being very good producers and of excellent table qualities.

THE SPRING SOWING OF ALFALFA is increasing to a large extent throughout the South with good results. Can be sown satisfactorily during the month of March in North and South Carolina and Tennessee, and any time from March 15th to May 1st in Virginia, West Virginia, Maryland and other adjoining States. Always remember that you are making a three to four year investment when sowing Alfalfa, and special care should be used in preparing the soil and obtaining only the best American grown seed. It is very desirable for this crop to commence preparing the soil sometime before seeding, so as to have the ground in first-class condition. An application of from 1 to 2½ tons of lime per acre is advisable, especially where there is any acidity of soil. Sow at the rate of 20 to 30 pounds to the acre. Detail information regarding the preparation of the soil, seeding, etc., is given on page 64 of our Spring Catalog.

WOOD'S FAMOUS ENSILAGE CORNS

It has been an established fact that the Ensilage Corns raised in Virginia are far superior to any fodder corns raised in any other section of the United States, and today our Ensilage Corns are shipped to practically every State in the Union as well as foreign countries. It has been demonstrated beyond question that our Virginia grown Ensilage Corns, when planted in a cooler latitude, will continue to grow stalk and fodder until actually stopped by frost, and far beyond any yield of stover that can be made from seed grown in the same section.

No stock raiser or farmer with a silo to fill can afford to put in corn that will not produce a growth on good land of fifteen tons per acre of green weight. This can be done by using any of our tested varieties of Ensilage Corns, which will easily produce fifteen tons or more to the acre.

Of the varieties that we offer the **PAMUNKEY**, which is an improved strain of the Eureka, stands at the head of any of the corns for producing an immense tonnage of fodder. This corn has produced as high as twenty tons of green weight per acre on good land.

WOOD'S VIRGINIA ENSILAGE and **EUREKA** are the next best heavy producing varieties. These two varieties ranked first in comparison test of ten other Ensilage Corns made at Skillman, New Jersey, both producing well over fifteen tons per acre.

The **Cocke's Prolific** and **Blue Mountain Corns** are favorites in various localities. The **Blount's Prolific** is ten to fifteen days earlier than the above varieties of corn, and being a corn well suited to a higher latitude, does better in sections of a shorter growing season.

We have on hand now unusually good strains of seed corns, and urge early orders so that the best of stocks can be secured. A trial of our famous **Virginia Grown Seed Corns** will convince you of their superiority. We are listing below several letters received about the wonderful yielding qualities of our Ensilage Corns:

61-Ton Silo Filled From 4½ Acres.

Last year I had 4½ acres of **Wood's Virginia Ensilage Corn**, and I don't think any other corn would have yielded any more on the same piece of ground. Lots of it was from 14 to 16 feet high. I filled a 11 x 32 feet silo, which is supposed to hold 61 tons, and had a lot left over. This year I had the same piece of ground in and just had enough. We had so much rain that it wasn't half worked. I think, comparing the two seasons, it did better this season than last according to the change it had.

Virginia Ensilage Corn is very well liked in this section. There are about 25 silos around here. I have filled the most of them, and I think at least eight out of every ten use the same kind of corn. When you ask them what kind of corn they use they say "Old Virginia." I think it is best, I don't know whether it is best or not, but it is good enough.—**HENRY M. McINTIRE**, Cecil County Md.

COTTON SEED.

Improved strains of early cotton are more in demand every year. Tests made at various experimental stations prove that varieties which produce a big crop early in the season make larger yields throughout the boll weevil district. Our cotton seed is grown especially for seed purposes in sections where the boll weevil is unknown. Constant selection by competent breeders insure pure stocks of all varieties.

WOOD'S INGOLD COTTON is a variety that shows the result of years of breeding. It produces a large growth for an early variety, and is a heavy yielder of cotton that will average over 39% lint when ginned.

ARTICHOKES are one of the best and most satisfactory crops that can be planted for feeding to hogs. They are considered to yield much more largely than potatoes on the same land, and can be left in the ground after being grown until you are ready to feed or harvest the crop. The hogs can be turned into the field where they are grown and allowed to harvest the crop themselves. We strongly recommend to our customers to plant more extensively of artichokes, as it is a most healthy and nutritious food for hogs, as well as for cattle, sheep and horses. Plant and cultivate the same as potatoes. It requires from four to five bushels to plant an acre.

Pamunkey Ensilage Produces 20 to 25 Tons Per Acre.

I can surely recommend **Pamunkey Ensilage Corn**, as I have been planting this variety for several years and have been growing from 20 to 25 tons per acre. A sure producer, and I am anxious to secure my seed now for this spring planting.—**PAUL H. BUSHONG**, Rockingham County, Va., March 15, 1920.

100-Ton Silo Filled From Less Than 4 Acres.

We planted your **Eureka Ensilage Corn** last year. It grew from 15 to 18 feet high. We filled 100-ton silo on less than 4 acres. We don't think we ever saw anything to beat it.—**W. B. THACKER**, Guilford County, N. C.

WOOD'S SPECIAL GRASS AND CLOVER MIXTURES.

Contain all of the most important varieties of grass and clover seed for grazing and mowing. The sowing of these mixtures provide a hay or grazing crop of very high feeding value, and will undoubtedly give much better results than the sowing of one or two grasses or clovers alone. March and April are the best months for spring sowing of our **Special Grass and Clover Mixtures**, and we cannot recommend their use too highly, as they will furnish an abundance of pasturage or hay on practically all types of soil. The sowing of a large number of grasses and clovers together is more in the way of crop insurance, as they will succeed under more adverse weather and soil conditions, with excellent results. The increased use of our **Special Grass and Clover Mixtures** and the many satisfactory reports we get from our customers prove the great advantage of sowing grasses and clovers in mixtures, both from a standpoint of soil improvement and yield.

CHUFAS.—To those interested in hog raising, Chufas should certainly be one of their standard crops, as they are highly nutritious, fattening, and greatly relished by hogs. They can be satisfactorily grown on any land suitable for corn, cotton or peanuts, succeeding especially well on light sandy soils. The feeding value of Chufas is about equal to corn, and gives the meat a decidedly sweeter taste. Chufas can be planted during the latter part of March to the 1st of June, and are ready to be grazed in about four months. Plant in 2½ to 3-foot rows, dropping from three to five Chufas together 15 to 18 inches apart in rows and covering to a depth of about two inches.

WOOD'S CROP SPECIAL.

Prices of Field Seeds are always subject to market fluctuations. We always fill all orders entrusted to us at lowest ruling prices on date order is received. If prices decline, we give our customers the benefit of it. If they advance, we charge the advance prices. In case customers desire to limit us to filling orders at prices quoted on any particular date, they will kindly so state on order. Mention date and number of "Wood's Crop Special" upon which the order is sent.

Terms on all Field Seeds, net cash. Customers who have no regular accounts with us will kindly remit the amount with their order or name business reference as customary before opening new accounts.

While we exercise great care to have all seeds pure and reliable, we give no warranty, express or implied, as to description, quality, productiveness, or any other matter connected with the goods we send out, and will not be in any way responsible for the crop. Every order for articles named in this price-list will be executed on these conditions on **v.**
